Connects fiber chemistry and structure to properties that can be designed and engineered Micro- and nanoscale, synthetic and natural polymer and non-polymer fibers explained with applications to industrial, electronic, biomedical and energy Information pertinent for fiber, textile, composite, polymer and materials specialists

This volume provides the basic chemical and mathematical theory needed to understand and modify the connections among the structure, formation and properties of many different types of manmade and natural fibers. At a fundamental level it explains how polymeric and non-polymeric fibers are organized, how such fibers are formed, both synthetically and biologically, and how primary and secondary properties, from basic flow to thermal and electrical qualities, are derived from molecular and submolecular organization, thus establishing the quantitative and predictive relationships needed for fiber engineering. The book goes on to show how fiber chemistry and modes of processing for dozens of materials such as silks, ceramics, glass and carbon can be used to control functional optical, conductive, thermal and other properties. Its discussion ranges over microscale and nanoscale fibers (nanofibers), covering methods such as spinning and electrospinning, as well as biological fiber generation through self-assembly. Technologies in this text apply to the analysis and design of fibers for industrial, electronic, optical, medical and energy storage applications.

From reader reviews:

Paul Eastman:

Would you one of the book lovers? If so, do you ever feeling doubt if you are in the book store? Make an effort to pick one book that you find out the inside because don't ascertain book by its protect may doesn't work is difficult job because you are scared that the inside maybe not seeing that fantastic as in the outside search likes. Maybe you answer can be Fundamentals of Fiber Science why because the great cover that make you consider concerning the content will not disappoint an individual. The inside or content is fantastic as the outside or perhaps cover. Your reading sixth sense will directly assist you to pick up this book.

Jared Hoskins:

Reading a book being new life style in this season; every people loves to examine a book. When you learn a book you can get a great deal of benefit. When you read books, you can improve your knowledge, because book has a lot of information on it. The information that you will get depend on what sorts of book that you have read. If you wish to get information about your examine, you can read education books, but if you want to entertain yourself you can read a fiction books, such us novel, comics, as well as soon. The Fundamentals of Fiber Science provide you with a new experience in examining a book.

Elizabeth Fischer:

As a college student exactly feel bored to help reading. If their teacher asked them to go to the library or even make summary for some reserve, they are complained. Just very little students that has reading's soul or real their leisure activity. They just do what the teacher want, like asked to go to the library. They go to right now there but nothing reading critically. Any students feel that reading is not important, boring as well as can't see colorful photographs on there. Yeah, it is to get complicated. Book is very important to suit your needs. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. Therefore this Fundamentals of Fiber Science can make you experience more interested to read.

Amy Tharp:

Reading a reserve make you to get more knowledge from the jawhorse. You can take knowledge and information originating from a book. Book is created or printed or illustrated from each source that will filled update of news. On this modern era like right now, many ways to get information are available for an individual. From media social like newspaper, magazines, science guide, encyclopedia, reference book, new and comic. You can add your knowledge by that book. Are you ready to spend your spare time to open your book? Or just seeking the Fundamentals of Fiber Science when you needed it?
