Modeling Carbon and Nitrogen Dynamics for Soil Management

Good management practices for carbon and nitrogen are vital to crop productivity and soil sustainability, as well as to the reduction of global greenhouse gases and environmental pollution. Since the 1950's, mathematical models have advanced our understanding of carbon and nitrogen cycling at both the micro- and macro-scales. However, many of the models are scattered in the literature, undergo constant modification, and similar models can have different names.

Modeling Carbon and Nitrogen Dynamics for Soil Management clarifies the confusion by presenting a systematic summary of the various models available. It provides information about strengths and weaknesses, level of complexity, easiness of use, and application range of each model. In nineteen chapters, internationally known model developers and users update you on the current status and future direction of carbon and nitrogen modeling.

The book's coverage ranges from theoretical comparison of models to application of models to soil management problems, from laboratory applications to field and watershed scale applications, from short-term simulation to long-term prediction, and from DOS-based computer programs to Object-Oriented and Graphical Interface designs. With this broad scope, Modeling Carbon and Nitrogen Dynamics for Soil Management provides the tools to manage complex carbon/nitrogen processes effectively.

From reader reviews:

Amy McCarter:

This Modeling Carbon and Nitrogen Dynamics for Soil Management tend to be reliable for you who want to be a successful person, why. The reason why of this Modeling Carbon and Nitrogen Dynamics for Soil Management can be on the list of great books you must have is actually giving you more than just simple reading food but feed anyone with information that perhaps will shock your prior knowledge. This book is definitely handy, you can bring it everywhere you go and whenever your conditions in the e-book and printed versions. Beside that this Modeling Carbon and Nitrogen Dynamics for Soil Management forcing you to have an enormous of experience such as rich vocabulary, giving you test of critical thinking that we understand it useful in your day exercise. So , let's have it and revel in reading.

Patrick Myers:

Reading a book tends to be new life style within this era globalization. With examining you can get a lot of information that will give you benefit in your life. The authors on this planet always try to improve their expertise in writing, they also doing some analysis before they write for their book. One of them is this Modeling Carbon and Nitrogen Dynamics for Soil Management.

Martha Fincher:

The particular book Modeling Carbon and Nitrogen Dynamics for Soil Management has a lot of information on it. So when you read this book you can get a lot of help. The book was compiled by the very famous author. Mcdougal makes some research before write this book. This kind of book very easy to read you will get the point easily after reading this article book.

Richard Barbosa:

Do you really one of the book lovers? If so, do you ever feeling doubt when you find yourself in the book store? Try and pick one book that you find out the inside because don't ascertain book by its protect may doesn't work this is difficult job because you are scared that the inside maybe not seeing that fantastic as in the outside search likes. Maybe you answer is usually Modeling Carbon and Nitrogen Dynamics for Soil Management why because the wonderful cover that make you consider in regards to the content will not disappoint a person. The inside or content is definitely fantastic as the outside or maybe cover. Your reading 6th sense will directly guide you to pick up this book.
