Numerical Computation of Internal and External Flows Volume 2: Computational Methods for Inviscid and Viscous Flows C. Hirsch, Vrije Universiteit Brussel, Brussels, Belgium This second volume deals with the applications of computational methods to the problems of fluid dynamics. It complements the first volume to provide an excellent reference source in this vital and fast growing area. The author includes material on the numerical computation of potential flows and on the most up-to-date methods for Euler and Navier-Stokes equations. The coverage is comprehensive and includes detailed discussion of numerical techniques and algorithms, including implementation topics such as boundary conditions. Problems are given at the end of each chapter and there are comprehensive reference lists. Of increasing interest, the subject has powerful implications in such crucial fields as aeronautics and industrial fluid dynamics. Striking a balance between theory and application, the combined volumes will be useful for an increasing number of courses, as well as to practitioners and researchers in computational fluid dynamics. Contents Preface Nomenclature Part V: The Numerical Computation of Potential Flows Chapter 13 The Mathematical Formulations of the Potential Flow Model Chapter 14 The Discretization of the Subsonic Potential Equation Chapter 15 The Computation of Stationary Transonic Potential Flows Part VI: The Numerical Solution of the System of Euler Equations Chapter 16 The Mathematical Formulation of the System of Euler Equations Chapter 17 The Lax - Wendroff Family of Space-centred Schemes Chapter 18 The Central Schemes with Independent Time Integration Chapter 19 The Treatment of Boundary Conditions Chapter 20 Upwind Schemes for the Euler Equations Chapter 21 Second-order Upwind and High-resolution Schemes Part VII: The Numerical Solution of the Navier-Stokes Equations Chapter 22 The Properties of the System of Navier-Stokes Equations Chapter 23 Discretization Methods for the Navier-Stokes Equations Index

From reader reviews:

Samuel Jackson:

Nowadays reading books be a little more than want or need but also get a life style. This reading habit give you lot of advantages. The advantages you got of course the knowledge the particular information inside the book which improve your knowledge and information. The information you get based on what kind of guide you read, if you want send more knowledge just go with training books but if you want truly feel happy read one with theme for entertaining for example comic or novel. Often the Numerical Computation of Internal and External Flows, Computational Methods for Inviscid and Viscous Flows is kind of guide which is giving the reader capricious experience.

Helen McCleary:

Spent a free a chance to be fun activity to complete! A lot of people spent their free time with their family, or their very own friends. Usually they doing activity like watching television, going to beach, or picnic in the park. They actually doing same every week. Do you feel it? Do you want to something different to fill your personal free time/ holiday? Could possibly be reading a book might be option to fill your no cost time/ holiday. The first thing that you'll ask may be what kinds of guide that you should read. If you want to test look for book, may be the e-book untitled Numerical Computation of Internal and External Flows, Computational Methods for Inviscid and Viscous Flows can be good book to read. May be it might be best activity to you.

Judy Brown:

People live in this new day time of lifestyle always try and and must have the spare time or they will get lots of stress from both way of life and work. So , if we ask do people have free time, we will say absolutely indeed. People is human not a robot. Then we ask again, what kind of activity do you possess when the spare time coming to an individual of course your answer will unlimited right. Then do you try this one, reading publications. It can be your alternative inside spending your spare time, often the book you have read is usually Numerical Computation of Internal and External Flows, Computational Methods for Inviscid and Viscous Flows.

Barbara Folsom:

Numerical Computation of Internal and External Flows, Computational Methods for Inviscid and Viscous Flows can be one of your beginner books that are good idea. All of us recommend that straight away because this publication has good vocabulary that may increase your knowledge in vocabulary, easy to understand, bit entertaining but still delivering the information. The writer giving his/her effort to set every word into joy arrangement in writing Numerical Computation of Internal and External Flows, Computational Methods for Inviscid and Viscous Flows yet doesn't forget the main stage, giving the reader the hottest as well as based confirm resource information that maybe you can be considered one of it. This great information can

certainly drawn you into brand new stage of crucial thinking.
