Sustainable Operating Systems/The Post Petrol Paradigm Michael Richards

This book has been described by University professors as "the single best book on building a sustainable society in print." This book documents the historic transition from the petroleum era into the post petrol paradigm. We stand at the very crossroads of this major historic shift. You are a witness to one of the most important times in history. This book provides you with a plan to participate in this major change. Access to petroleum fuel has been a dominant factor of the global economy and industrial civilization for the last 150 years. A paradigm is comprised of the generally accepted thought patterns that provide the base architecture for all other thought and activity within a society. A paradigm is what we think, before we think. Our present culture is based on The Petroleum Paradigm. To make the shift into the Post Petrol Paradigm we will engage in a radical transformation of the way we perceive ourselves as human beings within our global ecology. The new Post Petrol Paradigm is based on a dramatic change in the way we live. We change the way we live by changing the way we think. This book offers you a creative new way of thinking and living. Usually it takes a major crisis to motivate human beings to change their way of thinking. As long as we are comfortable, most of us do not change. The Petroleum Paradigm has reduced most of us to consumers rather than self-realized, intelligent human beings. Consumers do not really think, they respond to stimuli, such as 30-second political sound bytes or 60-second commercials that mentally program the consumer to participate in the mass consumer economy. This book is a wake up call for conscious action. It is time to wake up and think. This book is a catalyst for critic
