Conceptive C Harry Mcgeough

Conceptive-C is an AI programming Language based on Objective-C and C Language. It is a superset of both languages and is designed to work with Apple Mac OS X and iOS. The implementation is currently under development for GNU GCC. Conceptive C uses concepts to program natural language and Artificial Intelligence based computer language based on Objective C. One of the first computer programs that I saw was in an Advert for the Apple II. Someone was typing in questions and the computer was answering them. Having a conversation with the computer seemed like an easy thing to do, only it's not. In a sort of you can't get there from here, I figured out that I needed to make a language that would allow me to program AI ideas and concepts. I have done a bit of object programming using Objective C. I liked the way that Objective C added just enough to C to allow for programming of Objects. I wanted to do the same thing using Conceptive C to program idea's and concepts.
